Proximity Sensors Capacitive Thermoplastic Polyester Housing Types CA, M12, DC, Teach-in

TRIPLESHIELD™

CARLO GAVAZZI

- Featuring *TRIPLESHIELD™* Sensor Protection
- Sensing distance: 0.5 - 8 mm
- Teach-in of sensing distance via push-button or COM-input
- Automatic detection of NPN or PNP load
- Selectable make or break switching by means of Teach-in function
- Protection: Short-circuit, transients and reverse polarity
- Humidity compensation
- Alarm output
- 5 years of warranty
- On request: Delay on output. New line autotune to compensate for heavy dirt build-up

Product Description

Capacitive proximity switches with a sensing distance of either 6 mm flush mounted in metal or 8 mm non-flush mounted.
The switching points can be altered by means of the Teach-in function. 3-wire DC output with selectable make (NO) or break (NC) switching and NPN Alarm. Grey polyester housing with 2 m PVC cable or M12 plug.

Specifications

Sensing range (S_d)	0.5 - 8 mm factory set at 8 mm	**Indication** For output ON For safe/unsafe	 LED, yellow LED, green
Sensitivity	Adjustable (Teach-in)	**Environment**	
Effective operating dist. (S_r)	$0.9 \times S_n \leq S_r \leq 1.1 \times S_n$	Degree of protection Operating temperature	IP 68 -20 to +85°C (-4 to +185°F)
Usable operating dist. (S_u)	$0.8 \times S_r \leq S_u \leq 1.2 \times S_r$	Max. temperature on sensing face Storage temperature	120°C (248°F) -40 to +85°C (-40 to +176°F)
Repeat accuracy (R)	$\leq 5\%$	**Housing material**	
Hysteresis (H)	Depending on Teach-in	Body	Grey, thermoplastic polyester
Rated operational volt. (U_B)	10 to 40 VDC (ripple incl.)	Cable end Nuts	Polyester, softened Black, PA12 Grilamid
Ripple	$\leq 10\%$	**Connection**	
Rated operational current (I_e)	≤ 250 mA (continuous)	Cable	Grey, 2 m, 4 x 0.25 mm² Oil proof, PVC
No-load supply current (I_o)	≤ 12 mA	Plug (M1)	M12 x 1
Voltage drop (U_d)	≤ 2.5 VDC @ max. load	Cable for plug (M1)	CON.1A-series
Protection	Short-circuit, reverse polarity, transients	**Weight** Cable version Plug version	 110 g 30 g
***TRIPLESHIELD™* protection** Electrostatic discharge Burst Airborne HF Wire-conducted noise	 30 kV 3 kV > 15 V/m > 10 V$_{rms}$	**Approvals**	UL, CSA
		CE-marking	Yes
Frequency of operating cycles (f)	15 Hz		

CARLO GAVAZZI

Adjustment Guide

The environments in which capacitive sensors are installed can often be unstable regarding temperature, humidity, object distance and industrial (noise) interference. Because of this, Carlo Gavazzi offers as standard features in all

TRIPLESHIELD™ capacitive sensors a user-friendly sensitivity adjustment instead of having a fixed sensing range, extended sensing range to accommodate mechanically demanding areas, temperature stability to ensure minimum

need for adjusting sensitivity if temperature varies and high immunity to electromagnetic interference (EMI).

Note:
Sensors are factory set (default) to nominal sensing range S_n.

Installation Hints

Capacitive sensors have the unique ability to detect almost all materials, either in liquid or solid form. Capacitive sensors can detect metallic as well as non-metallic objects, however, their traditional use is for non-metallic materials such as:

- **Plastics Industry**
  Resins, regrinds or moulded products.

- **Chemical Industry**
  Cleansers, fertilisers, liquid soaps, corrosives and petrochemicals.

- **Wood Industry**
  Saw dust, paper products, door and window frames.

- **Ceramic & Glass Industry**
 Raw material, clay or finished products, bottles.

- **Packaging Industry**
  Package inspection for level or contents, dry goods, fruits and vegetables, dairy products.

Materials are detected due to their dielectric constant. The bigger the size of an object, the higher the density of material, the better or easier it is to detect the object. Nominal sensing distance for a capaci-

tive sensor is referenced to a grounded metal plate (ST37). For additional information regarding dielectric ratings of materials please refer to Technical Information.

To avoid interference from inductive voltage/ current peaks, separate the prox. switch power cables from any other power cables, e.g. motor, contactor or solenoid cables	*Relief of cable strain* Not correct Correct The cable should not be pulled	*Protection of the sensing face* A proximity switch should not serve as mechanical stop	*Switch mounted on mobile carrier* Any repetitive flexing of the cable should be avoided

Teach-in Guide

Adjustment - Background
No target present

Press push-button >3 seconds until LED´s are flashing one time per second. The background will be calibrated when the push-button is released during the following 3 seconds
| Push-button |
| LED - Green |
| LED - Yellow |
| Time (sec) |

0 1 2 3 4 5 6 7 8 9 10 11 12 13
Adjustment - Object
Target present

Press push-button >6 seconds until LED´s are flashing two times per second. The object will be calibrated when the push-button is released during the following 3 seconds

| Push-button |
| LED - Green |
| LED - Yellow |
| Time (sec) |

0 1 2 3 4 5 6 7 8 9 10 11 12 13
Adjustment - NO - NC

Press push-button >9 sec. until LED´s are flashing three times per second. The status of NO-NC will toggle when the push-button is released during the following 3 seconds

| Push-button |
| LED - Green |
| LED - Yellow |
| Time (sec) |

0 1 2 3 4 5 6 7 8 9 10 11 12 13

Releasing the push-button after 12 sec. returns the sensor to factory settings.

Wiring Diagram

BN+ (1)

BK (4)

$I_{LOAD} < 250mA$

$I_{ALARM} < 20mA$

WH (2)

Teach-in

BU- (3)

The PNP- or NPN-load will automatically be detected.

By means of the Teach-in wire, the functions described in the Teach-in Guide can be set-up.

It is possible to Teach-in more sensors at the same time by connecting the WH-wires in parallel to the common "-" supply.

(#): Plug connections

Important: If alarm output (WH-wire) is unused, it has to be terminated to +supply
